

now automatically

...up to **FIVE**

amino acid chromatograms

in 24 hours

(without human intervention)

Load it, set it and forget it...samples are automatically programmed one after the other...next day you'll have up to five complete chromatograms from a like number of samples. Technicon's accelerated Amino Acids AutoAnalyzer separates and analyzes the amino acids normally found in protein hydrolysates in less than five hours

...one machine completes the separation and analysis of up to *five different* samples in just one day.

One Chromatogram automatically follows another from start to finish with no human intervention. Here's how...merely arrange the required chromatographic columns (up to five) in series and autoanalyze the column effluents in pre-timed sequence. This advance in ion exchange chromatography is made possible by the superior resolving power of Technicon's unique Chromobead* resin...plus new chromatographic columns which are eluted by a very steep pH and ionic strength gradient.

Load 1, 2, 3, 4 or 5...

columns depending on your daily workload. What's more, you can adapt your present AutoAnalyzer system to this new technique.
